

# 95 MTS Series Commercial Water Softener

All systems are available in single, duplex, triplex, and quadplex operation.

Canature WaterGroup<sup>™</sup> has dedicated professional engineers with decades of commercial water treatment experience. Over the years, they have built a reputation for designing efficient, high quality commercial water softener systems.

Our **95MTS** Series softeners provide up to 132 gpm continuous soft water (Quadplex system with one tank allowed off line for regeneration at all times) 24 hours a day. They are engineered and thoroughly tested to provide years of reliable, trouble free performance with minimal maintenance.

Operating pressure: 20 - 100 psi

Operating temperature: 39 - 100° F

▶ Electrical: Input 120V 60 Hz - Output 24VAC

#### **Materials of Construction**

Control Valve: Plastic PPO (Noryl)

- Resin Tanks: Corrosion resistant fibreglass reinforced polyethylene NSF 44 Certified
- Brine Tank: High density polyethylene (includes plastic salt plate, brine well & cap, air check and safety float)
- Ion Exchange Resin: High Capacity IAPMO certified 8% Canature resin
- Internal Distributors

#### **Standard Features**

- MTS Controller: Fully programmable remote mounted control box
- Parallel Flow: All tanks on-line and are interlocked so only one can regenerate at a time
- Alternating Flow: At least one tank is always off-line for regeneration or ready in stand by
- Demand Flow: Tanks come on or off-line according to the flow rate demand so that the system is always operating at optimum efficiency
- System Interlock: A signal from other equipment can be accepted to lock out and prevent the system from regenerating
- Advanced Diagnostic Information: Easily trouble shoot andaccess system information displayed in real time
- Auxiliary Outputs: Up to two programmable outputs / relays can be added
- Battery Back Up System: In the event of a power loss, the system can continue to meter and monitor water usage for up to 9 hours

#### **Optimum Softening Efficiency**

MTS systems use 40-50% less salt and regeneration water compared to conventional systems. During periods of high flow demand, tanks come on-line to add flow rate capacity. During periods of low flow demand, tanks go off-line insuring optimal efficiency and product water quality.

#### Lower Capital Cost & Increased Flexibility

MTS systems are easily expandable and scalable. Additional tanks can be added to increase the capacity of the system as needed resulting in a lower initial investment compared to larger single or duplex systems.

#### **High Quality Soft Water Insurance**

Other manufacturers cannot detect low flow rates or any flow at all if there is a power outage resulting in system capacity being consumed undetected. MTS systems can detect flow rates under 1 gpm and total flow during power outages for up to 9 hours insuring all water being treated is accounted for.

#### **Model Numbers**

Example: MTS 90 -1.25D8OO = 3 cubic feet resin each tank, (2) 14x65 tanks

#### **Consistent High Quality Soft Water**

MTS series systems are engineered to prevent "channelling" which in other types of systems can cause hard water to leak through the bed during periods of low flow rates. MTS systems bring tanks on and off-line so that the flow rate through the tanks is always at optimal efficiencies to insure high quality soft water.

#### Simple Installation and Maintenance

The MTS systems are simple to install and maintain. Service technicians familiar with common residential products can easily install or service MTS systems.

#### Specifications (Figures are per tank)

Duplex = 2 Brine Tank Triplex = 3 Brine Tanks Quadplex = 4 Brine Tanks
